e-submission

The BC Ministry of Forests has implemented electronic submissions for Tenure, Permit, Silviculture and As Built Road information...

eziLINK™

With eziLink you can send submissions today!

This e-submission preparation tool makes creating your e-submissions as ezi as sending e-mail.

eziLink is a powerful stand-alone program, you can create submissions from the beginning without relying on another mapping or data management system. eziLink will help you capture both spatial and attribute data quickly and easily!

- eziLink integrates with your existing database and mapping infrastructure.

- eziLink is the only program available today that offers the complete solution for e-submission of forest tenure, permits, silviculture obligation and As Built Roads reporting.

- eziLink can be customized to your specific needs.

...e-submission will be mandatory in just a few months.
Are you ready to submit information in the new format?

With nearly twenty years experience, we know efficiency is a key factor in successful forest management. We desgned eziLink to be simple and provide the automation tools to quickly create submissions.
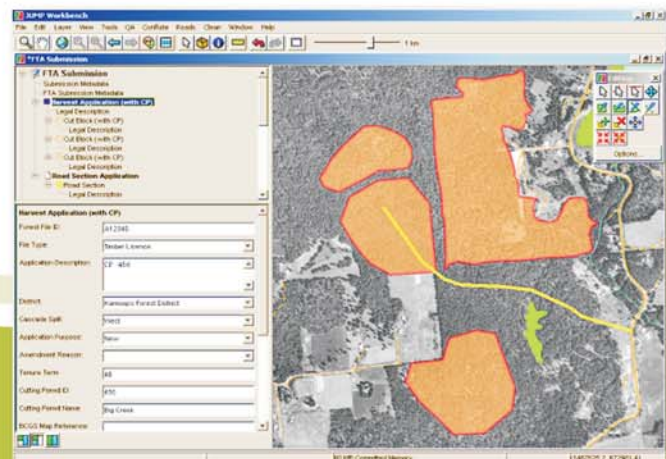

We specialize in e-submissions!

Features and Benefits:

Every feature of eziLink is designed to benefit the user. We took great care to make this software program fast, intuitive and to allow it to integrate into your work environment without interruption.

- Supports FTA submissions for Tenure/Permit application
- Supports RESULTS Submissions for Silviculture Reporting
- Supports ABR submissions for As Built Road submissions
- Supports visualization of e- submission formats without conversion, regardless of how you have created them
- Use as a stand-alone application or integrate with your existing infrastructure
- Designed to support integration with existing mapping and database systems
- Simple installation, easy to use with built in submission automation tools
- Create submissions without a mapping or data management system
- Native Support for XML/GML
- Built on open standards and technology
- Both spatial and attribute data are supported.

Many forest industry leaders already take advantage of these benefits, eziLink is currently used by the BC Ministry of Forests, the Ministry Sustainable Resource Management and various forest licensees and consulting groups for their electronic submissions

The development of *eziLink*™ is the result of combining the experience and expertise of two companies well established as leaders in their fields for providing quality products and services.

The only stand-alone e-submission software!
